

Task 2: Data Visualization and Storytelling

Elevate Labs Data Analyst Internship

Project Overview

An interactive E-commerce Analysis Dashboard was developed in Power BI using Flipkart sales data. The dashboard focuses on sales performance, customer behavior, product analysis, city-wise performance, conversion funnel analysis, and business insights.

KPI Summary

The dashboard analyzed over 20K orders from 8.6K customers. Total revenue reached \$11.92M with more than 60K units sold.

Product Analysis

Electronics generated the highest revenue at approximately \$5M. The top 5 products contributed over \$300K in combined sales.

Customer Analysis

Customer segments contributed almost equally to total revenue, indicating balanced purchasing behavior.

City Analysis

North Michael was the top-performing city, generating more than \$22K in revenue and leading in quantity sold.

Monthly Trends

July recorded the highest sales at \$1.14M, while November and December showed a decline in revenue.

Funnel Analysis

The overall conversion rate was 7.15%. View-to-cart conversion was 21.49%, and cart-to-purchase conversion was 33.29%.

Key Business Insights

Electronics led revenue generation, July was the best-performing month, North Michael was the strongest city, and conversion optimization opportunities were identified.

Conclusion

The dashboard effectively transformed raw e-commerce data into actionable business insights to support decision-making and business growth.
